Curated Reference-Section Comments by OpenReviewer for 32 Computer Science Papers

- I am not convinced that references [4], [7], [16-18], and [33] are relevant to the topic considered in this paper. Their inclusion weakens the precision of the related-work framing and suggests that the literature review has not been sufficiently focused on the most directly comparable prior work.
- References [6], [18], and [13] appear to contain formatting inconsistencies or incomplete bibliographic details.
- This reference [47] appears to contain incorrect publication year; please check and revise it. As per the cross validation on CrossRef, DBLP, and google scholar, it is suggested to write 2016 instead of 2014.
- The reference [17] includes a DOI that does not appear to resolve correctly; please correct it.
- The DOI given for the reference [38] appears to resolve to a different paper. Please verify and correct the entry.
- The cited venue in [11] seems incorrect; this work is associated with ICCV conference rather than the MDPI Sensors journal.
- Please verify the ordering of authors in reference [29], as it seems inconsistent with the IEEE metadata associated with the DOI.
- The access date reported in [17] for MS COCO dataset is impossible and should be fixed, as 30-Feb-2023 is not a valid calendar date.
- The reference [22] appears to contain a partial DOI rather than a complete one.
- The reference list appears overly weighted toward YOLO- and transformer-related papers, whereas the paper's core concept is fuzzy systems. The literature review would be stronger if it included more directly relevant prior work on fuzzy methods.
- Reference [51] appears to correspond to a retracted article. Please verify this and replace or explicitly justify the citation if it is retained.

  https://pubmed.ncbi.nlm.nih.gov/35028125/

  Please verify whether reference [2] remains appropriate to cite in support of the current claim, given the presence of post-publication discussion on PubPeer.

  https://pubpeer.com/publications/73E47AB35A8B0205B49593DF22C485#0

- Reference [37] appears to contain an incomplete or truncated title and should be corrected.

- The bibliography seems somewhat dated, with over **64%** of the cited papers being older than five years. Please update the reference list to better reflect current developments.
- Reference [5] appears to list the same author more than once. Please verify whether this is a typographical error or an issue in the BibTeX entry.
- The bibliography does not appear fully consistent in style. Please ensure that all references follow a single uniform format for author names, venue names, capitalization, page ranges, and DOI/URL presentation.
- Some references may be duplicated under different citation numbers. For instance, [3]/[44], [21]/[22], and [35]/[50].
- The reference [16] appears to be missing page numbers.
- A few conference references [30] and [58] seem to lack complete venue details.
- The reference [24] appears in the references list but is not cite anywhere in the text.
- The authors should review whether the cited references substantiate the surrounding discussion. For example, in the Introduction, the text discusses CNN-based approaches, but reference [39] appears to concern federated learning for image classification and does not seem directly relevant.
